

# Information from QM Therapy Settings:

**Create a subdirectory Progr and Protocol** = In case of redirection, the Program and Protocol folder will be created in the folder with the client name.

**Import to RavoRife** = creates an export file for Ravo Rife

**Import to Elzapp** = creates an export file for Elzapp

**Programs from FQ Qmtrin** = adds programs recommended from FQ Qmtrin to the ends of the frequency programz FQ Qmtrin

**Email Timing** = in case of the entered e-mail address, an e-mail message will be sent when starting the timing in QM Timing.

**Pos. F, L, I, M** = case of the distinguishing letter in the files with programs (batches). At the beginning or end of the abbreviation of the name.

**Use IsertTest from the past** = (not available in all versions) will use the previous entry in the block for entering your own preparations (vegetotest).

**Show last data** = after starting the program, the data of the last client will be loaded before closing the program.

**Ideal + Max.** = In addition, program files (batches) with frequencies with an ideal range and a maximum range are generated.

**Automatic** = after QF Scan, QM Therapy starts automatically

**No special characters** = Client file names are created without accents. Suitable for foreign language windows mutations.

**Smaller windows** = Suitable for old computers with very low resolution, usually not necessary to use.

**Slower PC** = Suitable for old computers at low speed, usually not necessary to use.

**Proc. [%]** = Displays the percentage value corresponding to the order of the given frequency (ATTENTION: only affects frequencies, not preparations)

**Dark color motif** = darkens the background color in all windows. It is better to keep a bright motif if possible.

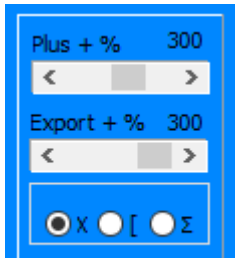

**Protocol overview** = a clear protocol for the given client will be created and constantly added.

**Year is the first** = if the year is the first in the subsequent date, it is marked.

**New Version Firmware in FQ** = It is only marked if a new version is installed in the FQ Qmtrin device, or when using the FQT Gener device

**FQT Color** = new version FQT Gener.

In case the obtained outputs are used in a device other than the FQ Qmtrin Quantum Harmony, e.g. in a zipper, it is possible to choose to extend the time. The Plus or Export sliders can be preset to add a certain number of minutes to all frequencies in all output files or only in files for export.

The button **X** is the default setting.

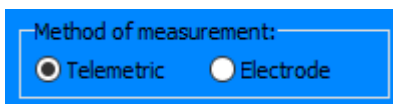

The button **I** (symbol of the program name – batch) means that all output data files will be separated into separate programs (batches) and will be run separately and independently.

The (sum) **Σ** button means that all output data files will be in a single program (batch) and will be run at once.

**Sensitivity** = the higher the sensitivity, the more results. It is set to about 50% by default, this gives enough output to be put into an optimally long dose.

**Limit** = this is an optical separation of the obtained results of the preparations by a horizontal line.

**Font size** = The font size can be changed. It will only take effect after restarting the program.

**Method of measurement** = telemetric or using electrodes.

If the method using electrodes is chosen, the electrodes must be held throughout the therapy

**Color** = setting a different color spectrum.

**Left check mark** = sort product packages by response

**Right check mark** = do not display manufacturer for product packages

## Information from QM Timing Settings:

**Backup items** = the performed therapy is written to a separate file

**Email Timing** = in case of the entered e-mail address, an e-mail message will be sent when starting the timing in QM Timing.

**Cloud PC** = in case of cooperation of several PCs via Cloud storage.

**Overwritt** = data at the same time are overwritten, otherwise they are composed one after the other.

**Use last setting when entering** = the last data will be displayed when entering the duration and repeating the therapy
